Hi,

We are in favor of the suggested post stamp method for tariffs in the natural gas system in Sweden. Our main arguments are listed below:

- The tariff should be non-discriminating. We consumers have no influence on how the system is fed with natural gas. Post stamp method makes sure no one is discriminated based on decisions on connections/supply, the capacity-distance method does not do this.
- Post stamp method is used in the distribution system for electricity and it is reasonable that the same principals are used for different energy systems.
- The suggested method is the same as in the majority of the European systems
- Large differences in the distribution costs in the system would effect the use of natural gas and a gas net that is less utilized would have higher cost per transported unit
